Measuring organisational capability: beyond competence

Dr Stewart Hase
Australian Capability Network
Southern Cross University

Previous research by the author and colleagues has shown a recognition by organisations that they need to pay more attention to developing employee capability in order to adapt to a rapidly changing and highly turbulent world. Specifically human resource development and training methods need to be designed so that they to build on competence and find ways to enable people to learn, be creative, use competencies in novel as well as familiar circumstances, develop self-efficacy and to work well in teams. In addition human resource management needs to involve helping people use these dimensions of capability through effective systems and management behaviours.

There are several lines of evidence that suggest that there is a need to move beyond training to harnassing ecological learning in order to develop human capability, as well as competence. The research described here involved the development of a diagnostic instrument to measure organisational capability which can be used to redesign training management practice. The implications of this instrument, the research findings and capability for vocational education and training are discussed in detail.

Conference themes: The changing nature of work
Key word: Competence, capability, human resource management.
